

SHRED-IT'S

RECYCLING PROCESS

For every two consoles shredded and recycled, one tree is saved.

The newly recycled pulp is mixed with fresh pulp to manufacture new paper products.

Confidential documents are dropped into a secure, locked console.

1

2

On a scheduled basis, consoles are emptied and all confidential documents are destroyed.

3

A Certificate of Destruction is issued to each customer.

EACH YEAR, SHRED-IT CUSTOMERS WITH A REGULARLY-SCHEDULED SERVICE RECEIVE A CERTIFICATE DETAILING THE NUMBER OF TREES SAVED.

6

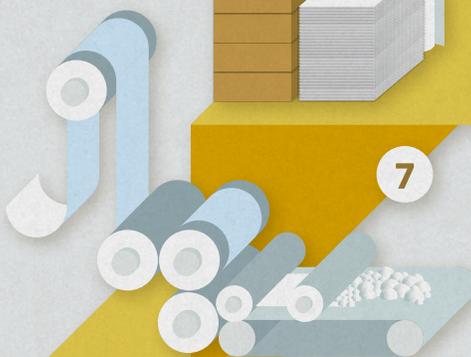

The pulp is put through a screening process that filters out impurities and prepares it for the removal of printing ink.

5

Pulp is made as the fibers of the shredded paper are separated.

4

Shredded paper is transported to a paper mill for recycling.

7

Making sure it's secure.™
